## Audio Noise Suppressor

**For all recorded sound media, old or new**

The choice of recording industry,  
archives and collectors around the world

**Three processors** for reduction  
of transient **and** steady-state noises  
**Plus** special features for optimum reproduction  
of old records, lateral or vertical

Mono model: **\$1,950**; Mono/Stereo: **\$2,450**

"Most commercially available [noise reduction] systems of an open-ended nature—which is essential for 78s—are nearly worthless. There are several notable exceptions; the finest are the superb Packburn units. The Packburn has three noise reduction techniques:

- (1) 'Switching', which selects the quieter of the two mono groove walls when there is a significant difference;
- (2) 'Blanking', which eliminates most clicks and pops as found in the REAL world of historical recordings as opposed to artificially contrived demonstrations; and
- (3) it contains a continuous noise suppressor (gated high frequency filter) which does not damage the sound and can be adjusted to pass any transients without the 'swish-swish' effect of previous similar systems."

... Michael Lane  
(From *Mix* - "The Recording Industry Magazine")

"Nothing can make a 1930's 78 sound like a Proprius, but if you're attracted by the idea of making these older recordings sound as good as they possibly can, there is no better choice at any price than a Packburn..."

"Old discs whose surfaces sounded like frying bacon came out [of the tick suppressor] sounding like tape—not particularly quiet tape, but tape nonetheless, rather than bacon. And the dynamic filter reduced even that to a much lower level, as with the hiss from actual tapes and noisy FM broadcasts."

... J. Gordon Holt  
(From *Stereophile*)

"The most effective of all in HF's experience"

... Michael Riggs  
(From *High Fidelity*)
